**THE HIGH TIDES IN OCTOBER.**—The Melbourne *Argus* of Friday states that Mr. Ellyer, the Government astronomer, supplies the following interesting particulars respecting the high tides to be expected on the 4th October next:—

Some few weeks ago a paragraph appeared in most of the daily journals, advising the public to be on their guard against unusually high tides about the 4th and 5th of October next. As these critical days approach, this warning is becoming more and more important, and it is now being given with increased emphasis.

Some of the most important facts to be gathered to the aid of the public are, that the high tide will be unusually high, and that it will be accompanied by a strong easterly wind, which will be a most dangerous combination.

It is therefore, most important that the public should be warned of the danger, and that they should be prepared to meet it.
